

# BT8380

## SYSTEM X™ VERTICAL COLUMN

The BT8380 vertical support columns serve as the foundational element for the majority of System X trolley or floor stand setups. Constructed from durable yet lightweight aluminium, these columns are engineered to provide robust support for single or multiple horizontal mounting rails. With a contemporary design aesthetic and integrated cable management, they add a premium touch to any installation. These columns, available in 1.8m and 0.6m lengths, can be connected using extension kits (available separately). This flexibility allows for creating videowalls and other installations reaching heights of up to 4.2m, providing versatility to meet various needs.
